## Features

- Travel Indicator
- Large Flow
- Stability
- Fast Response
- Steel and Stainless Steel Constructions  
Meet API 614 Requirements
- Available Constructions to Meet  
NACE MR0175-2003 and NACE MR0103  
Requirements for Sour Gas Service Capability
- Multiple Trim Materials Available
- ANSI/FCI 70-3-2004 Class VI Shutoff
- Multiple End Connection Options
- $P_1 = P_2$  on High-Pressure Actuator
- Suitable for High-Temperature Applications  
up to 250°F / 121°C
- Easy Access to Trim Parts
- Drain Valve
- Pressure-Loaded Actuator
- Bleed valve (for High-Pressure Actuator only)

# Bulletin 71.1:MR105

## Specifications

The Specifications section on this page provides the ratings and other specifications for the Type MR105. The following information is stamped on the nameplate fastened on the regulator at the factory: type; body size; maximum inlet, outlet and differential pressure; maximum pressure above setpoint; maximum casing pressure; maximum temperature; spring range; cage type; and trim and diaphragm material.

### Body Sizes and End Connection Styles

See Table 1

### Shutoff Classification per ANSI/FCI 70-3-2004

Class VI (Soft Seat)

### Maximum Inlet, Outlet and Emergency Casing Pressure<sup>(1)</sup>

See Table 3

### Outlet Pressure Ranges<sup>(1)</sup>

5 to 300 psig / 0.34 to 20.7 bar; see Table 2

### Maximum Setpoint<sup>(1)</sup>

**Low-Pressure Actuator:** 43 psig / 3.0 bar

**High-Pressure Actuator:**

*Nitrile (NBR) and Ethylene Propylene (EPDM)*

*Diaphragm:* 300 psig / 20.7 bar

*Fluorocarbon (FKM) Diaphragm:*

150 psig / 10.3 bar

### Construction Materials

See Table 6

### Maximum Differential Pressures<sup>(1)</sup>

See Table 4

### Flow and Sizing Coefficients

See Table 5

### Temperature Capabilities<sup>(1)</sup>

**Nitrile (NBR):** -20 to 180°F / -29 to 82°C

**Fluorocarbon (FKM):** 20 to 250°F / -7 to 121°C<sup>(2)</sup>

**Ethylene Propylene (EPDM)<sup>(3)</sup>:** -20 to 225°F / -29 to 107°C

### Pressure Registration

External

### Downstream Control Line Connection Size

1/2 NPT

### Maximum Pressure Over Setpoint to Avoid Internal Parts Damage<sup>(1)</sup>

**Low-Pressure Actuator:** 20 psig / 1.4 bar

**High-Pressure Actuator:** 120 psig / 8.3 bar

### Spring Case Vent

Type Y602-12

### Pressure-Loaded Spring Case Vent Connection

1/2 NPT

### Approximate Weights

#### For Type MR105 with Low-Pressure Actuator

*NPS 1 / DN 25:* 86 lbs / 39 kg

*NPS 2 / DN 50:* 116 lbs / 53 kg

*NPS 3 / DN 80:* 165 lbs / 75 kg

*NPS 4 / DN 100:* 174 lbs / 79 kg

#### For Type MR105 with High-Pressure Actuator

*NPS 1 / DN 25:* 76 lbs / 34 kg

*NPS 2 / DN 50:* 105 lbs / 48 kg

*NPS 3 / DN 80:* 155 lbs / 70 kg

*NPS 4 / DN 100:* 164 lbs / 74 kg

### Options

- Visual Travel Indicator
- Drain Valve
- Pressure-Loaded Actuator
- NACE Construction
- Bleed Valve (for High-Pressure Actuator Only)
- Ethylene Propylene (EPDM) Elastomer Trim Parts

1. The pressure/temperature limits in this Bulletin or any applicable standard limitation should not be exceeded.

2. Fluorocarbon (FKM) is limited to 200°F / 93°C in hot water.

3. Ethylene Propylene (EPDM) is limited to 20 to 250°F / -7 to 121°C when used with Low Pressure Actuator.

## Introduction

The Type MR105 regulators are direct-operated, pressure reducing, high-capacity, multi-purpose regulators.

They are designed to handle pressures up to 400 psig / 27.6 bar and temperatures up to 250°F / 121°C.

This product provides a simple, fast, reliable and economical way to control and reduce pressure in multi-purpose applications suitable for different flow media such as liquid, air and gas. Applications include lube oil

systems and any application where speed of response is critical, minimum differential pressure is a concern or fluid is not free of impurities. Type MR105 regulator with a low-pressure actuator can be set up to 43 psig / 3.0 bar and the high-pressure actuator version can be set up to 300 psig / 20.7 bar.

The units are available in 4 sizes, NPS 1 through 4 / DN 25 through 100 and are available in several end connection configurations to meet demands on application requirements.

1. NPS 2 / DN 50 body size spring range is limited to 45 psig / 3.1 bar. 2. Maximum setpoint is limited to 150 psig / 10.3 bar for constructions with Fluorocarbon (FKM) diaphragm.										

Available in linear and quick opening trim cages for gas and liquid applications, respectively. The cage-guided metal plug provides superior control and stability.

The Type MR105 with steel or stainless steel body construction has been designed to meet API 614 as required by lube oil manufacturers.

## Features

**Travel Indicator**—Travel indicator option provides visual indication of the valve movement from the closed to open position.

**Large Flow**—Able to pass large flow rates with minimal offset from setpoint.

**Stability**—The Type MR105 regulator's cage-guided metal plug design provides superior control stability of delivery pressure.

**Fast Response**—Direct-operated allows for fast response to meet the most demanding pressure and flow requirements.

**Steel and Stainless Steel Constructions Meet API 614 Requirements**—Steel and Stainless steel body constructions comply with the recommendations of API Standard 614.

**Available Constructions to Meet NACE MR0175-2003 and NACE MR0103 Requirements for Sour Gas Service Capability**—Optional materials are available for applications handling sour gases. These constructions comply with the recommendations of NACE International Standards MR0175 and MR0103.

**Multiple Trim Materials Available**—416, 316 and 316L Stainless steel options are available to meet wider application requirements including demands on lube oil and cooling water applications.

1. Based on a maximum temperature of 250°F / 121°C.

2. Maximum outlet and emergency casing pressures for constructions with Fluorocarbon (FKM) diaphragm are limited to 230 psig / 15.8 bar or the body rating limit, whichever is lower.

1. Based on a maximum temperature of 250°F / 121°C.

2. Maximum outlet and emergency casing pressures for constructions with Fluorocarbon (FKM) diaphragm are limited to 230 psig / 15.8 bar or the body rating limit, whichever is lower.

**ANSI/FCI 70-3-2004 Class VI Shutoff**—Soft-seat valve plug disks for tight shutoff.

**Multiple End Connection Options**—Type MR105 is available in several end connection configurations to meet demands on application requirements.

**$P_1 = P_2$  on High-Pressure Actuator**—Inlet pressure rating equals outlet pressure rating on high-pressure actuator constructions up to 400 psig / 27.6 bar.

**Easy Drain**—Feature allows you to drain the system without expensive spool pieces saving you time and space.

**Easy Bleed**—Feature allows you to purge the air trapped underneath the diaphragm when the high-pressure regulator is installed in the upright position, which improves speed of response.

## Principle of Operation

Refer to Figure 2. The Type MR105 is a direct-operated pressure reducing regulator. Downstream pressure is registered externally through a 1/2 NPT control line tapped in the low-pressure actuator bonnet or in the high-pressure actuator lower casing. When downstream demand decreases, the pressure under the actuator diaphragm increases. This pressure overcomes the regulator setting (which is set by the regulator control spring). Through the action of

the actuator stem and valve spring, the valve plug moves closer to the seat ring and reduces flow. When demand downstream increases, pressure under the actuator diaphragm decreases. Spring force pushes the actuator stem downward, the valve plug moves away from the seat ring and the flow increases downstream as the regulator opens in response to the decreased pressure underneath the diaphragm. The downward motion of the plug allows gas to flow through the cage into the downstream system.

Increased downstream pressure permits the regulator to close. The combination of valve spring force and valve plug unbalance provides positive valve plug shutoff against the port and upper seals.

## Overpressure Protection

Type MR105 regulator with the low-pressure actuator has outlet pressure ratings lower than the inlet pressure ratings. Complete downstream overpressure protection is needed if the actual inlet pressure exceeds the outlet pressure rating.

Overpressuring any portion of a regulator or associated equipment may cause personal injury, leakage or property damage due to bursting of pressure-containing parts or explosion of accumulated gas. Provide appropriate pressure-relieving or pressure-limiting devices to ensure

M1178

M1181

- INLET PRESSURE
- OUTLET PRESSURE
- ATMOSPHERIC PRESSURE

**Figure 2. Type MR105 Operational Schematic**

**Figure 3.** Lube Oil Skid Diagram

that the limits in the Specifications section are not exceeded. Regulator operation within ratings does not prevent the possibility of damage from external sources or from debris in the pipeline. A regulator should be inspected for damage periodically and after any overpressure condition. Refer to the relief sizing coefficients in the Specifications and the Capacity Information section to determine the required relief valve capacity.

## Installation

Vertical installation with the actuator installed directly above or below the main valve is recommended but for optimal performance the actuator should be installed below the main valve. The use of a bleed valve is recommended for liquid installations that require the high pressure actuator to be mounted above the main valve. The unit will operate in horizontal installations with the actuator on the side, however, this could result in premature wear of parts. Make sure that flow will be in the same direction as that indicated by the body arrow. Orientation of the two vents should always be down. Vents may be rotated after regulator installation so that the vent screens are down.

A control line must be installed to allow outlet pressure to register on the actuator's diaphragm. The size of the control line is indicated in the Specifications section, and should be installed four to eight pipe diameter downstream of the regulator and in an area of pipe that is free of turbulence.

An instruction manual is provided with every regulator shipped. Refer to this for detailed installation, operation, adjustment and maintenance instructions. Included is a complete listing of individual parts and recommended spare parts.

## Applications

### Note

**A linear cage is recommended for applications where low flow stability is a concern but it will limit the overall capacity of the regulator.**

## Lube Oil Skids (Figure 3)

Lube oil skids maintain oil flow to bearings, seals and servo-controls on critical turbomachinery assets such as air and gas compressors, steam turbines, power recovery turbines and power generating equipment. These skids are essential in keeping lube oil clean at all times and ensure maximum service life for the equipment. Because it is critical to maintain a constant flow and pressure of oil to the equipment, it is normally equipped with two pumps – the main pump and the auxiliary pump, which will take over in case of main pump failure – and filters.

In normal condition, the skids operate in the following manner:

- Lube oil is stored in the tank at atmospheric pressure.
- It is then fed to the main pump (Pump 1) which pressurizes the lube oil.
- Oil then goes through a filter.
- After filtration, oil flow is split such that a fraction is sent to a backpressure regulator to limit the supply pressure to the pressure reducing regulator. 20% of the pump rate flows through the backpressure regulator, sending back oil to the oil tank.
- The pressure reducing regulator decreases the pressure to a safe and allowable range. Flow through this regulator is 80% of pump rate.

**Figure 4.** Type MR105 Monitor Regulator Operational Schematic

- Oil flows to large rotating equipment lubricating bearings, e.g. turbines and compressors.

The loss of pressure or flow to the bearings or these turbomachinery assets may shut down the equipment or even the whole plant. Failure of the main pump or filter results in the following upset operation:

- Auxiliary pump (Pump 2) and filter system is brought into operation while main pump is in operation.
- Auxiliary pump ramp up rate is one second.
- Auxiliary pump produces a pressure spike that is beyond the limitations of the pressure reducing regulator.
- The backpressure regulator relieves the excess pressure back to the oil tank. Flow rate is 120% of total pump rate.

Main pump can now be shut down to allow repair of the system. High capacity direct-operated regulators are recommended for this type of application where speed of response is critical. The Type MR105 can provide fast response to the pressure spikes as described above while maintaining a constant delivery pressure of oil to the bearing.

## Wide-Open Monitoring System

Refer to Figure 4. Monitoring system provides overpressure protection by containment and therefore does not vent to the atmosphere. It involves a specific arrangement of two regulators in series which are configured such that if one regulator fails wide open, the other regulator assumes control to maintain the downstream pressure at a set limit. During an overpressure situation, monitoring systems keep the customer on line. Testing is also relatively easy. To perform a periodic test on a monitoring regulator, increase the outlet set pressure of the worker regulator and watch the outlet pressure gauge to determine if the monitor regulator takes over at the appropriate outlet pressure.

In such systems, both regulators are sensing downstream pressure. During normal operation of a wide-open monitor configuration, one regulator (worker) is set at the desired downstream pressure. The other regulator (monitor) is set at a higher pressure and remains wide open. The lock-up pressure will be the worker regulator lock-up pressure. If the worker regulator fails open, the monitor regulator controls the downstream pressure at its setpoint and the lock-up pressure will be the monitor lock-up pressure.

## Universal NACE Compliance

Optional materials are available for applications handling sour gases. These constructions comply with the recommendations of NACE International Sour Service Standards.

The manufacturing processes and materials used by Emerson Process Management Regulator Technologies, Inc. assure that all products specified for sour gas service comply with the chemical, physical and metallurgical requirements of NACE MR0175 and/or NACE MR0103. Customers have the responsibility to specify correct materials. Environmental limitations may apply and shall be determined by the user.

## Capacity Information

### Air Capacities

To determine wide-open flow capacity for relief valve sizing, use one of the following equations:

### For Critical Pressure Drops

Use this equation for critical pressure drops (absolute outlet pressure equal to one-half or less than one-half the absolute inlet pressure).

$$Q = P_{1(ABS)} C_g$$

where,

- Q = gas flow rate, SCFH
- C<sub>g</sub> = gas sizing coefficient
- P<sub>1</sub> = absolute inlet pressure, psia

### For Non-Critical Pressure Drops

Use this equation for pressure drops lower than critical (absolute outlet pressure greater than one-half of absolute inlet pressure).

$$Q = \sqrt{\frac{520}{GT}} C_g P_1 \sin \left[ \frac{3417}{C_1} \sqrt{\frac{\Delta P}{P_1}} \right] \text{ DEG}$$

**Table 6. Construction Materials**

Adjusting Screw	Zinc-Plated steel	Stainless steel

1. Powder coated.

where,

- Q = gas flow rate, SCFH
- G = specific gravity of the gas
- T = absolute temperature of gas at inlet, °Rankine
- C<sub>g</sub> = gas sizing coefficient
- P<sub>1</sub> = absolute inlet pressure, psia
- C<sub>1</sub> = flow coefficient
- ΔP = pressure drop across the regulator, psi

Then, if capacity is desired in normal cubic meters per hour at 0°C and 1.01325 bar, multiply SCFH by 0.0268.

## Liquid Capacities

To determine regulating capacities or to determine wide-open capacities for relief sizing at any inlet pressure, use the following equation.

$$Q = C_v \sqrt{\frac{\Delta P}{G}}$$

where,

- Q = liquid flow rate, GPM
- ΔP = pressure drop across the regulator, psi
- C<sub>v</sub> = regulating or wide-open flow coefficient
- G = specific gravity of the liquid

## Maximum Allowable Pressure Drop for Liquid

Pressure drops in excess of allowable will result in choked flow and possible cavitation damage.

Choked flow is the formation of vapor bubbles in the liquid flowstream causing a condition at the vena contracta which tends to limit flow through the regulator. The vena contracta is the minimum cross-sectional area of the flow stream occurring just downstream of the actual physical restriction.

Cavitation and flashing are physical changes in the process fluid. The change is from the liquid state to the vapor state and results from the increase in fluid velocity at or just downstream of the greatest flow restriction, normally the regulator orifice.

To determine the maximum allowable pressure drop for water:

$$\Delta P_{(allow)} = K_m (P_1)$$

where,

- ΔP = Valve differential in psi
- K<sub>m</sub> = Valve recovery coefficient from Table 5
- P<sub>1</sub> = Valve inlet pressure in psia

# Bulletin 71.1:MR105

## Ordering Information

Use the Specifications section on page 2 and carefully review the description to the right of each specification. Use this information to complete the

Ordering Guide below. Specify the desired selection wherever there is a choice to be made. Then send the Ordering Guide to your local Sales Office.

## Ordering Guide

### Body Size (Select One)

- ☐ NPS 1 / DN 25
- ☐ NPS 2 / DN 50
- ☐ NPS 3 / DN 80
- ☐ NPS 4 / DN 100

### Actuator Type (Select One)

- ☐ Low Pressure
- ☐ High Pressure

### Cage Type (Select One)

- ☐ Linear (For Gas Service Only)
- ☐ Quick Open (For Liquid Service Only)

### Body Material and End Connection Style (Select One)

#### Cast Iron

- ☐ NPT (1 or 2 NPT only)
- ☐ CL125 FF
- ☐ CL250 RF

#### WCC Steel

- ☐ NPT (1 or 2 NPT only)
- ☐ CL150 RF
- ☐ CL300 RF
- ☐ CL600 RF
- ☐ PN 16 RF
- ☐ PN 16/25/40 RF (NPS 1 or 2 / DN 25 or 50 only)

#### CF8M Stainless Steel

- ☐ NPT (1 or 2 NPT only)
- ☐ CL150 RF
- ☐ CL300 RF
- ☐ CL600 RF
- ☐ PN 16 RF
- ☐ PN 16/25/40 RF (NPS 1 or 2 / DN 25 or 50 only)

#### CF3M Stainless Steel

- ☐ NPT (1 or 2 NPT only)
- ☐ CL150 RF
- ☐ CL300 RF
- ☐ CL600 RF
- ☐ PN 16 RF
- ☐ PN 16/25/40 RF (NPS 1 or 2 / DN 25 or 50 only)

### Diaphragm, O-rings and Seal Materials (Select One)

- ☐ Nitrile (NBR)
- ☐ Fluorocarbon (FKM)
- ☐ Ethylene Propylene (EPDM)

### Actuator Type and Outlet Pressure Range (Select One)

#### NPS 1 / DN 25

##### Low-Pressure Actuator

- ☐ 5 to 12 psig / 0.34 to 0.83 bar, White
- ☐ 10 to 24 psig / 0.69 to 1.6 bar, Silver
- ☐ 14 to 32 psig / 0.96 to 2.2 bar, Orange
- ☐ 18 to 43 psig / 1.2 to 3.0 bar, Red

##### High-Pressure Actuator

- ☐ 25 to 60 psig / 1.7 to 4.1 bar, Green
- ☐ 43 to 100 psig / 3.0 to 6.9 bar, White
- ☐ 75 to 175 psig / 5.2 to 12.1 bar, Silver<sup>(1)</sup>
- ☐ 110 to 300 psig / 7.6 to 20.7 bar, Orange<sup>(1)</sup>

#### NPS 2 / DN 50

##### Low-Pressure Actuator

- ☐ 5 to 12 psig / 0.34 to 0.83 bar, White
- ☐ 10 to 24 psig / 0.69 to 1.6 bar, Silver
- ☐ 14 to 32 psig / 0.96 to 2.2 bar, Orange
- ☐ 18 to 43 psig / 1.2 to 3.0 bar, Red

##### High-Pressure Actuator

- ☐ 25 to 45 psig / 1.7 to 3.1 bar, Green
- ☐ 43 to 100 psig / 3.0 to 6.9 bar, White
- ☐ 75 to 175 psig / 5.2 to 12.1 bar, Silver<sup>(1)</sup>
- ☐ 110 to 300 psig / 7.6 to 20.7 bar, Orange<sup>(1)</sup>

#### NPS 3 and 4 / DN 80 and 100

##### Low-Pressure Actuator

- ☐ 5 to 8 psig / 0.34 to 0.55 bar, White
- ☐ 8 to 20 psig / 0.55 to 1.4 bar, Silver
- ☐ 12 to 30 psig / 0.83 to 2.1 bar, Orange
- ☐ 18 to 39 psig / 1.2 to 2.7 bar, Red

##### High-Pressure Actuator

- ☐ 39 to 72 psig / 2.7 to 5.0 bar, White
- ☐ 71 to 175 psig / 4.9 to 12.1 bar, Silver<sup>(1)</sup>
- ☐ 110 to 250 psig / 7.6 to 17.2 bar, Orange<sup>(1)</sup>

### Optional

- ☐ Visual Travel Indicator
- ☐ Drain Valve
- ☐ Pressure-Loaded Actuator
- ☐ NACE Construction
- ☐ Bleed Valve (for High-Pressure Actuator Only)

- continued -

1. Maximum setpoint is limited to 150 psig / 10.3 bar for constructions with Fluorocarbon (FKM) diaphragm.

## Ordering Guide (continued)

### Main Valve Replacement Parts Kit (Optional)

- ☐ Yes, send one replacement parts kit to match this order.

### Actuator Replacement Parts Kit (Optional)

- ☐ Yes, send one replacement parts kit to match this order.

### Wireless Position Monitor Mounting Kit (Optional)

- ☐ Yes, send one mounting kit for mounting the Topworx™ 4310 or the Fisher® 4320 wireless position monitor.

Regulators Quick Order Guide	
***	Readily Available for Shipment
**	Allow Additional Time for Shipment
*	Special Order, Constructed from Non-Stocked Parts. Consult your local Sales Office for Availability.
Availability of the product being ordered is determined by the component with the longest shipping time for the requested construction.
